

FOR GREEN TECH FUTURE!

WASTE MANAGEMENT – GROUP TASK SHEET

Waste Management In You City

Each of us produces new rubbish every day. And it's hard to avoid it. As long as we will produce new products, as long as we will produce new waste. But can this be done wisely and without damaging our environment so much?

Every country and often every city has its own waste policy. Nowadays, the linear economy model is being replaced by the recycling and circular economy model.

YOUR TASK:

1. Check out the waste policy in your country and city.
2. Prepare a group presentation on the most important principles of waste policy in your country and city.

Present the results of your work during the camp in Gdansk!

- 1 Check out the waste policy in your country and city.
 - (1) Try to find out what the average waste production per capita is in your country.
 - (2) What percentage of waste is recycled in your country/city.
 - (3) What are the most important principles of waste policy in your country/city?
 - (4) How waste is collected and what is happening with it in the next steps?
 - (5) What special steps is your country/city taking to reduce waste generation, e.g. total elimination of plastic nets in shops or introduction of charges for them?

- 2 Prepare a short group presentation (5 minutes) on the most important principles of waste policy in your country and city. How was it in the past and how is it now? What are the plans for the future?

Present the results of your work at the camp!
